## New security CCTV camera to be launched at yacht show

A new security CCTV camera is to be launched at the Monaco Yacht Show this week, it has been revealed.

The new Triple-A Surveillance System (TASS), which is made by Extreme Exclusive B.V., boasts unmanned aerial vehicles that are remotely controlled using GPS technology, according to synfo.com. 22/09/2010 17:10

Underwater robots are also used as part of the all-round system, with these units also remotely controlled.

Both air and underwater units are controlled from a central surveillance hub, but can work autonomously.

With cameras in the air as well as in the water, yacht owners can enjoy their vessel safe in the knowledge they have every angle covered.

The news provider states: "The unmanned aerial vehicles and underwater robots are active for surveillance purposes when the TASS system orders a task. It can [also] be used for showing the exact position of equipment around the boat."

Furthermore, if a boat party is on the cards, the units can double up as social video cameras.
